

# WT-6060 IULTCS leather reciprocating friction color fastness testing machine

## 1. Introductions

Fix untreated and treated white square pure wool felt on the friction head of the IULTCS leather reciprocating friction color fastness testing machine, and use the friction head to drive the white square pure wool felt to rub colored leather with a fixed stroke and constant pressure for a certain number of times. The color fastness of colored leather to friction is evaluated by the staining level and color reduction level of the white square wool felt.

## 2. Relative test methods

SATRA TM177, ISO11640, DIN53339, SATRA TM173, ENISO20344, GB/T20991, QB/T2537

## 3. specifications

No.	Item	Spec.
1	Moving path	Reciprocating friction
2	Pressure of friction head	500g,1000g
3	Stroke	35-40mm
4	Frequency	40±2 times per minute
5	Size of wool felt	15x15mm
6	Power supply	AC220V,10A
7	Dimension	550x400x420mm
8	Weight	40kg
